Title of the Project
Crime Record Management System

ABSTRACT

The **Crime Record Management System** is a comprehensive software solution developed to streamline the management of criminal records and related data for law enforcement agencies. Built using **HTML,CSS,SQL** and PHP this desktop-based application is designed to enhance efficiency, accuracy, and accessibility in handling sensitive criminal information.

The system provides a user-friendly interface for storing, updating, and retrieving criminal profiles, including personal details, criminal history, and associated case records. Key features include robust search functionality, role-based access control, and secure data storage to ensure confidentiality and prevent unauthorized access. The project demonstrates the integration of backend databases with a graphical user interface to create a practical tool for real-world applications.

This project is particularly useful for students and developers interested in exploring Python-based application development and database management. It showcases the potential of technology in modernizing traditional processes, ensuring data integrity, and improving overall operational workflows within law enforcement agencies.
